

Rest Easy, Live Fully

What does good sleep look like?

A good night's sleep is essential for overall health and well-being. Here's a concise overview of what characterizes good sleep:

Characteristics of Good Sleep:

- **Easy Sleep Onset:** You should fall asleep within 15-30 minutes of lying down.
- **Undisturbed Sleep:** Minimal awakenings throughout the night; you should not frequently wake up or have trouble falling back asleep.
- **Consistent Sleep Duration:** Aim for 7-9 hours per night, depending on age and individual needs.
- **Refreshing Wakefulness:** You should feel refreshed and alert upon waking, ready to start your day.

Sleep Needs by Age:

- **Toddlers:** Require significantly more sleep than adults, 10-14 hours.
- **Children (Ages 5 and Up):** Sleep patterns become similar to adults, needing around 9-11 hours.
- **Teenagers:** Generally need about 8-10 hours for optimal functioning.
- **Adults:** Typically require 7-9 hours of sleep.
- **Older Adults (Age 80+):** Sleep needs gradually decrease, often requiring less than 7 hours.

Sleep Stages and Cycles:

- **Sleep Cycles:** Cycles lasts about 90-110 minutes. An average person completes around 5 cycles in 8-hours.
- **REM Sleep (Rapid Eye Movement):** Characterized by quick eye movements beneath closed eyelids. The brain is highly active, and dreaming occurs during this stage.
- **Non-REM (NREM) Sleep:**
 - **Stage 1:** Very light sleep; easy to awaken.
 - **Stage 2:** Light sleep; accounts for about half of the total sleep cycle.
 - **Stage 3:** Deep sleep; restorative rest occurs, and external noises have less impact.
- **Cycle Transition:** The sleep cycle begins with light sleep, progresses to deep sleep, and then transitions to REM sleep, which lengthens throughout the night.
